

Why Sign a Universal Authorization?

When you sign our universal authorization you are allowing the doctors and nurses who care for you at participating doctors' offices and hospitals to access your healthcare information. This information ensures you get the best, most efficient care possible.

In the case of an emergency, this authorization also ensures that a doctor or nurse in a participating emergency department who is caring for you can access your health information, including your lab results and allergies.

Frequently Asked Questions

I get all of my care in one place, why do I need this?

Unforeseen situations, such as health emergencies may require you to be seen by a doctor or nurse outside of your area. The universal authorization ensures your health information is available to participating doctors and nurses who are caring for you.

Is my medical information secure and private?

The same patient confidentiality guidelines that apply to your paper records, also apply to your online health information. In addition, your online information is encrypted and password protected so only your care team can view it.
